POWDER TECHNOLOGY

www.elsevier.com/locate/powtec

Subject Index of Volume 109

Agglomerate
Numerical simulation of metallic solid bridging particles in a fluidized bed at high temperature, 27
Agglomerates
Numerical simulations of impact breakage of a spherical crystalline agglomerate, 113
Alignment of the easy axis
3-D simulation of magnetic particles' behaviour during compaction in a magnetic field, 234
Anisotropic magnetic powders
3-D simulation of magnetic particles' behaviour during compaction in a magnetic field, 234
Axisymmetric compression/extension
Quasi-static shear deformation of a soft particle system, 179

Biaxial tests
Experiments and numerical simulations with 2D disks assembly, 206
Binary systems
Granular dynamics simulation of segregation phenomena in bubbling gas-fluidised beds, 41
Blast furnace
Numerical simulation of the gas–solid flow in a bed with lateral gas blasting, 13
Bulk attrition
Distinct element analysis of bulk crushing: effect of particle properties and loading rate, 241

Centrifugal mills
DEM simulation of industrial particle flows: case studies of dragline excavators, mixing in tumblers and centrifugal mills, 83
Centrifugal tumbling granulator
Numerical simulation of particulate flow with liquid bridge between particles (simulation of centrifugal tumbling granulator), 49
Chute
Simulations and physical measurements of glass spheres flowing down a bumpy incline, 133
Column-like structure
Micro-deformation mechanism of shear banding process based on modified distinct element method, 192
Compaction in a magnetic field
3-D simulation of magnetic particles' behaviour during compaction in a magnetic field, 234
Computational fluid dynamics
Numerical simulation of the gas–solid flow in a bed with lateral gas blasting, 13
Contacts dynamics
Experiments and numerical simulations with 2D disks assembly, 206
Contact stiffness
Effect of particle mechanical properties on silo flow and stresses from distinct element simulations, 164

Couette flow
Wall stresses in granular Couette flows of mono-sized particles and binary mixtures, 145
Crushing strength
Distinct element analysis of bulk crushing: effect of particle properties and loading rate, 241
Cylinder
Quasi-three-dimensional numerical simulation of spouted beds in cylinder, 3

Defluidization
Numerical simulation of metallic solid bridging particles in a fluidized bed at high temperature, 27
DEM
Numerical simulation of particulate flow with liquid bridge between particles (simulation of centrifugal tumbling granulator), 49
Discrete element simulations of dense packings and heaps made of spherical and non-spherical particles, 278
DEM simulations
Experiments and numerical simulations with 2D disks assembly, 206
Deposit growth dynamics
Deposit growth dynamics: particle sticking and scattering phenomena, 262
Dilatancy
Micro-deformation mechanism of shear banding process based on modified distinct element method, 192
Discrete element method
Numerical simulation of metallic solid bridging particles in a fluidized bed at high temperature, 27
DEM simulation of industrial particle flows: case studies of dragline excavators, mixing in tumblers and centrifugal mills, 83
Discrete element analysis of tumbling mills, 105
Numerical simulations of impact breakage of a spherical crystalline agglomerate, 113
Quasi-static shear deformation of a soft particle system, 179
Discrete element modeling
DEM simulation of wave propagation in granular materials, 222
Discrete element simulation
Microstructure evolution in compacted granular beds, 255
Discrete element simulations
Wall stresses in granular Couette flows of mono-sized particles and binary mixtures, 145
Discrete modelling
Effect of particle mechanical properties on silo flow and stresses from distinct element simulations, 164
Discrete particle method
Numerical simulation of the gas–solid flow in a bed with lateral gas blasting, 13
Discrete particle simulation
Simulations and physical measurements of glass spheres flowing down a bumpy incline, 133

Elsevier Science S.A.
PII: S0032-5910(00)00220-5

Distinct element analysis
Distinct element analysis of bulk crushing: effect of particle properties and loading rate, 241
Dragline
DEM simulation of industrial particle flows: case studies of dragline excavators, mixing in tumblers and centrifugal mills, 83
Dynamic contact
DEM simulation of wave propagation in granular materials, 222

Fabric
DEM simulation of wave propagation in granular materials, 222
Fluidisation
Numerical simulation of the gas–solid flow in a bed with lateral gas blasting, 13
Granular dynamics simulation of segregation phenomena in bubbling gas-fluidised beds, 41
Fracture
Numerical simulations of impact breakage of a spherical crystalline agglomerate, 113
Friction
Discrete element simulations of dense packings and heaps made of spherical and non-spherical particles, 278
Friction coefficient
Effect of particle mechanical properties on silo flow and stresses from distinct element simulations, 164

Gas–solid flow
Numerical simulation of the gas–solid flow in a bed with lateral gas blasting, 13
Granular
Experimentally validated computations of flow, mixing and segregation of non-cohesive grains in 3D tumbling blenders, 59
Granular dynamics simulation
Granular dynamics simulation of segregation phenomena in bubbling gas-fluidised beds, 41
Granular flow
Simulations and physical measurements of glass spheres flowing down a bumpy incline, 133
Granular material
Micro-deformation mechanism of shear banding process based on modified distinct element method, 192
Granular materials
Wall stresses in granular Couette flows of mono-sized particles and binary mixtures, 145
Experiments and numerical simulations with 2D disks assembly, 206
Microstructure evolution in compacted granular beds, 255
Granular matter
Effect of particle mechanical properties on silo flow and stresses from distinct element simulations, 164
Granular media
Quasi-static shear deformation of a soft particle system, 179
Granular mixing
Computational studies of granular mixing, 72
DEM simulation of industrial particle flows: case studies of dragline excavators, mixing in tumblers and centrifugal mills, 83

Hard-spheres
Granular dynamics simulation of segregation phenomena in bubbling gas-fluidised beds, 41

Impact
Numerical simulations of impact breakage of a spherical crystalline agglomerate, 113
Iron particles
Numerical simulation of metallic solid bridging particles in a fluidized bed at high temperature, 27

Lagrangian Simulation
Computational studies of granular mixing, 72
Liquid bridge
Numerical simulation of particulate flow with liquid bridge between particles (simulation of centrifugal tumbling granulator), 49
Localization of deformation
Experiments and numerical simulations with 2D disks assembly, 206

Micromechanics
Quasi-static shear deformation of a soft particle system, 179
Micro-deformation mechanism of shear banding process based on modified distinct element method, 192
Microstructure
Microstructure evolution in compacted granular beds, 255
Mixing
Experimentally validated computations of flow, mixing and segregation of non-cohesive grains in 3D tumbling blenders, 59
Modeling
Discrete element analysis of tumbling mills, 105

Non-spherical particles
Discrete element simulations of dense packings and heaps made of spherical and non-spherical particles, 278
Numerical modeling
Discrete element simulations of dense packings and heaps made of spherical and non-spherical particles, 278
Numerical simulation
Quasi-three-dimensional numerical simulation of spouted beds in cylinder, 3
Numerical simulation of metallic solid bridging particles in a fluidized bed at high temperature, 27
Micro-deformation mechanism of shear banding process based on modified distinct element method, 192

Particle
Distinct element analysis of bulk crushing: effect of particle properties and loading rate, 241
Particle Dynamics
Computational studies of granular mixing, 72
Particle mixture
Wall stresses in granular Couette flows of mono-sized particles and binary mixtures, 145
Particle sticking
Deposit growth dynamics: particle sticking and scattering phenomena, 262
Particle velocity
Numerical simulation of particulate flow with liquid bridge between particles (simulation of centrifugal tumbling granulator), 49
Particulate modelling
3-D simulation of magnetic particles' behaviour during compaction in a magnetic field, 234

Raceway
Numerical simulation of the gas–solid flow in a bed with lateral gas blasting, 13

Sandpiles
Discrete element simulations of dense packings and heaps made of spherical and non-spherical particles, 278
Scattering phenomena
Deposit growth dynamics: particle sticking and scattering phenomena, 262
Segregation
Granular dynamics simulation of segregation phenomena in bubbling gas-fluidised beds, 41

Shear band development
Micro-deformation mechanism of shear banding process based on modified distinct element method, 192
Simulation
Experimentally validated computations of flow, mixing and segregation of non-cohesive grains in 3D tumbling blenders, 59
Spouted beds
Quasi-three-dimensional numerical simulation of spouted beds in cylinder, 3
Surface diffusion
Numerical simulation of metallic solid bridging particles in a fluidized bed at high temperature, 27

Tumbler
DEM simulation of industrial particle flows: case studies of dragline excavators, mixing in tumblers and centrifugal mills, 83
Tumblers
Experimentally validated computations of flow, mixing and segregation of non-cohesive grains in 3D tumbling blenders, 59
Tumbling mills
Discrete element analysis of tumbling mills, 105

Vibration-induced densification
Microstructure evolution in compacted granular beds, 255

Wall stresses
Effect of particle mechanical properties on silo flow and stresses from distinct element simulations, 164
Wave propagation
DEM simulation of wave propagation in granular materials, 222
